

Safe Driving Is the Artwork of Awareness Etched in One's mind.

**Night driving =
lower visibility, shorter reaction times**

1. Watch for pedestrians;
2. Have annual vision exams;
3. Slow down — to compensate for limited visibility and reduced stopping time.

Road construction is 24/7

1. Expect the unexpected, including sudden stops and starts;
2. Signal well ahead of making a lane change;
3. Put some space between yourself and others.

Avoid fatigue and drowsy driving

Adults need 7-9 hours of sleep to reach peak performance levels.
