

Visibility, Not Vulnerability

Safe Driving in Bright Lighting

Your eyes must adjust between abrupt changes in light level. You may be effectively blind for a short time.

Tips for Too Much Light

- Use sun visors
- Wear sunglasses
- Keep windshield and all windows clean, inside and out

Many eye and vision problems have no obvious signs or symptoms.

Safe Driving in Low Lighting

Objects, including other vehicles, may not be fully illuminated. You could miss a stop sign or pedestrian.

Tips for Too Little Light

- Slow down
- Increase following distance
- Use headlights

Routine eye and vision examinations are essential.
